1 Analysis

1.1 Problem Identification

1.1.1 Problem Description

Popular inventory management solutions are relatively expensive, and may be out of reach for individuals or small schools. Inventory systems have numerous benefits for businesses and individuals alike; a business may choose to track their supply levels where an individual may wish to catalogue their DVD collection.

My goal is to create a web-based application aimed at both businesses and individuals to manage inventory, with additional modern features such as automatic item re-ordering when stocks are running low.

Traditional inventory management solutions are typically single-user at best, whereas I intend to create a multi-user, collaborative environment.

In my view, an inventory system should be:

- Easy for end users to use.
- Cross platform
- Performant interface
- Efficient in terms of adding data
- Allow for easy cataloguing of inventory
- Allow for item scanning using QR codes / barcodes
- Be able to source data from external sources
- Support both consumable and non-consumable goods.

1.1.2 Stakeholders

Stakeholder	Description	Current Use	Requirements
Claire Foley	SEnCo, Library Lead at The Village Prep School	No system. Library books are not tracked.	TBD

1.1.3 Interview

1.1.4 Existing similar solutions

InvenTree <https://inventree.org/>

Overview

InvenTree is an **open-source** inventory management system, providing *low level stock control and part tracking*. It uses a Python/Django database backend and provides both a **web-based interface** as well as a REST API for interacting with other services. InvenTree also has a powerful plugin system for custom applications and other extensions.

Below is a screenshot of the InvenTree homepage.

Build	Description	Project Code	Priority	Part	Progress	Status	Created	Issued by	Responsible	Target
BO0016	Making widgets for SO 0003	-	0	Widget Assembly Variant	0 / 75	Pending	2022-05-25	admin	-	-

BO0007	Making red square tables	-	0	Red Square Table	0 / 15	Production	2022-04-29	allaccess	-	-

Parts applicable to my solution

The core concept is similar (the application is web-based), but my solution will be more generalized than just stock control.

PartKeeper <https://partkeepr.org/>

The screenshot shows the PartKeeper web application interface. On the left is a 'Categories' sidebar with a tree view of electronic components. The main area displays a 'Parts List' table for the selected category. The table has columns for Name, Description, Storage Location, Status, Condition, Stock, Min. Stock, Avg. Price, Footprint, and Internal ID. The data is grouped by sub-categories like 'Root Category > 0 Replimat > Connectors > JST PH (8 Part(s))' and 'Root Category > 0 Replimat > Connectors > JST XH (9 Part(s))'. The status for all parts is 'REPLIMAT'. The stock column shows values like 50 pcs, 100 pcs, 12 pcs, 0 pcs, 1270 pcs, 160 pcs, 140 pcs, 370 pcs, 80 pcs, 57 pcs, 40 pcs, 49 pcs, 223 pcs, 67 pcs, 57 pcs, 52 pcs, 50 pcs, 75 pcs, 56 pcs, 21 pcs, 31 pcs. The avg. price is consistently 0.006. The footprint column shows various values like 1826 (#1ec), 1827 (#1er), 1839 (#1f3), 1830 (#1eu), 1849 (#1td), 1848 (#1tc), 1847 (#1tb), 1844 (#1rb), 1845 (#1r9), 1846 (#1ta), 1840 (#1fa), 1843 (#1f7), 1842 (#1f6), 1853 (#1fh), 1831 (#1ev), 1816 (#1eg), 1817 (#1eh), 1818 (#1ef), 1815 (#1ef), 1811 (#1eb), 1813 (#1ed), 1814 (#1ee), and 1812 (#1ec).

Name	Description	Storage Location	Status	Condition	Stock	Min. Stock	Avg. Price	Footprint	Internal ID

Overview

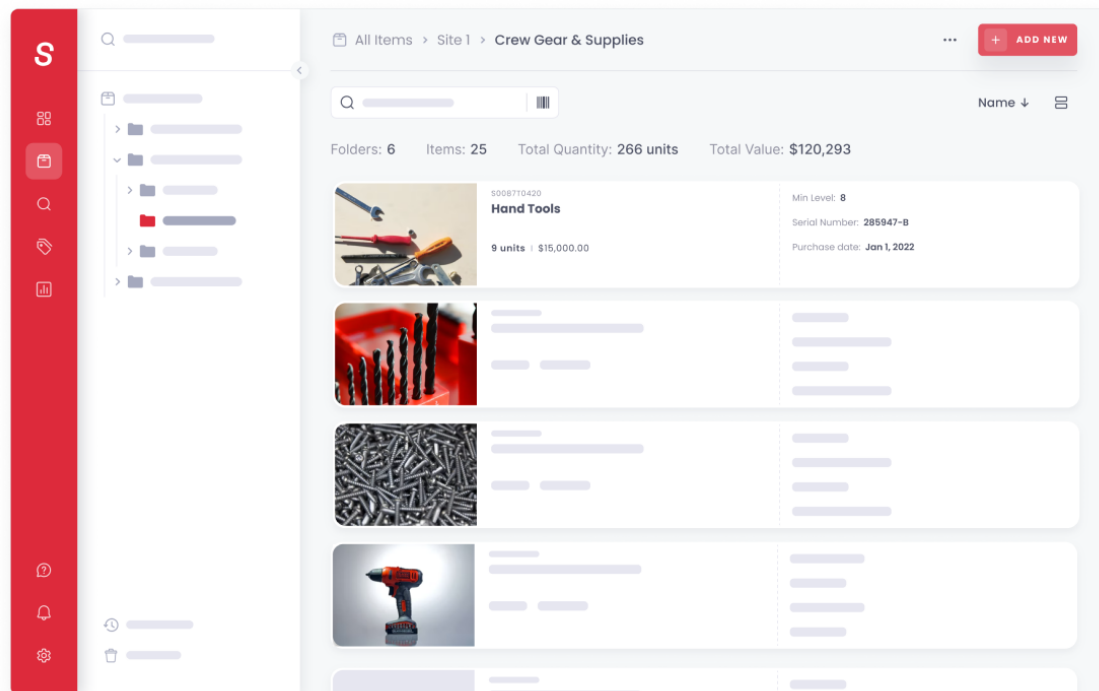

PartKeeper is an open-source inventory management system with a focus on electronic components. It is designed around four main principles:

- Fast Part Searching
- Ability to add complete part database
- Keeping track of stock
- Ease of use

Parts applicable to my solution

Like PartKeeper, I hope to implement a web-based interface. However, I am using a different approach as my solution will not be tailored specifically to electronic components.

Sortly <https://www.sortly.com/solutions/inventory-management-software/>

Overview

Sortly is a proprietary cloud-based inventory management system with a focus on small businesses and individuals.

It has two plans available, an always free plan with limited functionality and a paid plan with a more complete feature-set.

Parts applicable to my solution

I hope to implement the following features from Sortly:

- Web based interface
 - Allows for easy access.
- Barcode support
 - Allows end users to print off QR codes to stick to items
 - Which can be scanned in-app to easily perform actions on the item.
- Real-time reporting insights
 - Allows for added insight into usage patterns for particular units.

1.1.5 Features to be incorporated into solution

1.1.6 Feedback from stakeholders

1.2 Requirements

1.2.1 Stakeholder requirements

1.2.2 Software and hardware requirements

1.2.3 Success requirements

2 Design

2.1 User Interface Design

2.1.1 Usability Features

2.1.2 Feedback from stakeholder

2.2 Modular breakdown

2.3 Algorithms

2.4 Data Dictionary

2.5 Inputs and outputs

2.6 Validation

2.7 Testing

2.7.1 Methods

2.7.2 Test Plan

3 Implementation

3.1 First Iteration

4 Testing

5 Evaluation
